My name is Munyaneza Ngabo.

Registration number: 25/27861

App name: MNPortfolio

Verification code: MOB-A2-7861

Course: SWE 3409 — Mobile Application Development

Assignment: Individual Assignment 2

Date: 12 October 2026

UI / UX Design Document — MNPortfolio

1. Purpose and audience

MNPortfolio is a personal portfolio app for a recruiter reviewing the student in under two minutes. It must work offline, communicate identity clearly, and demonstrate real React Native skills.

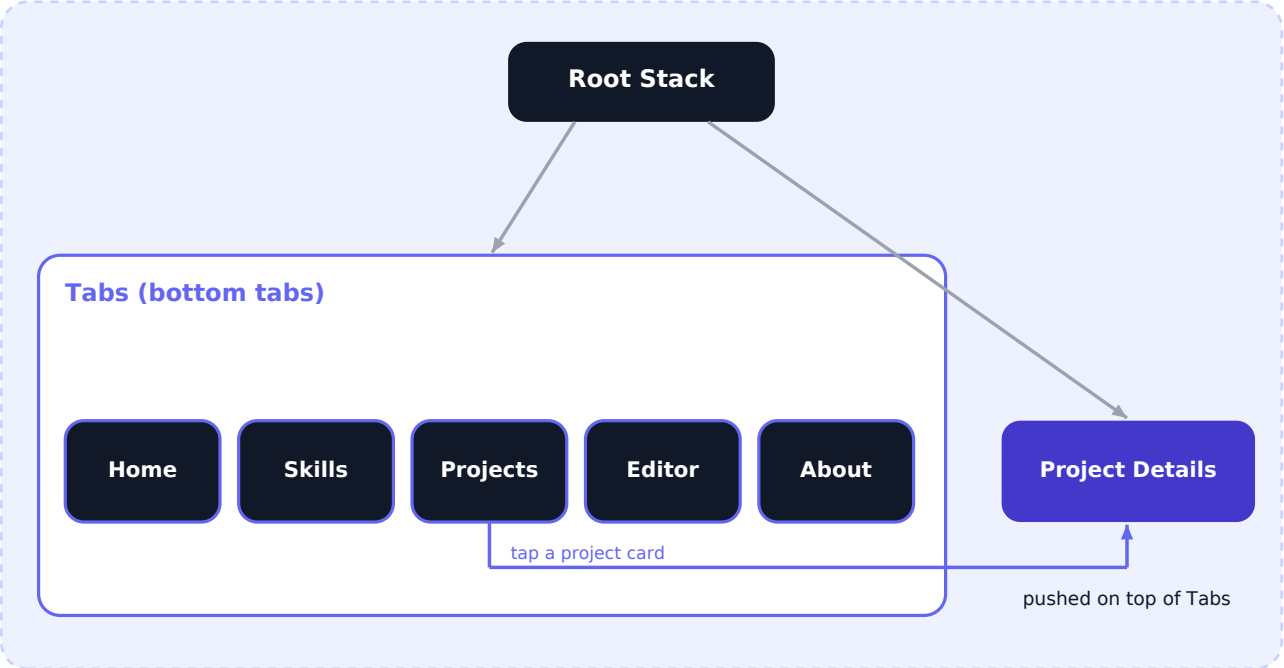

2. Design principles

- **Clarity first** — every screen has one primary message.
- **Offline-safe** — no screen depends on the network.
- **Consistent** — one dark theme, one card style, one chip style.
- **Readable** — minimum body text 15 pt, headings 18–28 pt, high contrast text.
- **Accessible** — tappable areas ≥ 48 pt, colour contrast ≥ 4.5:1, no colour-only meaning (validation errors include text, availability status includes a label).

3. Colour system

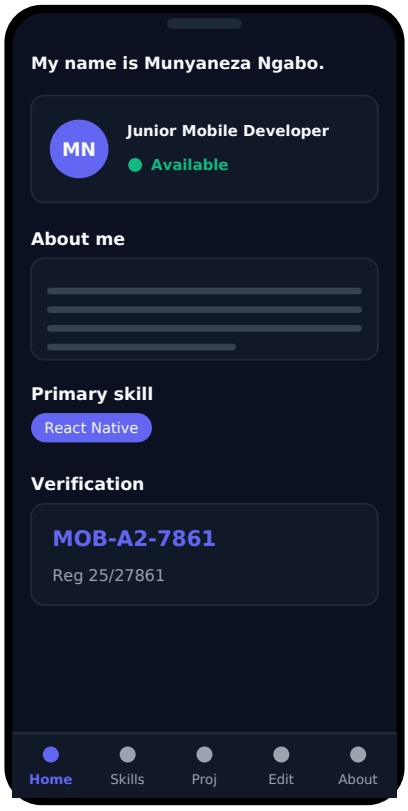

Role	Hex	Swatch
Background	#0B1120	
Surface (card)	#111827	
Border	#1F2937	
Primary accent	#6366F1	
Text primary	#F9FAFB	
Text muted	#9CA3AF	
Success	#10B981	
Danger (errors)	#EF4444	

4. Navigation map

The app uses a Root Stack containing the bottom-tab navigator (Home, Skills, Projects, Editor, About). Project Details is pushed on top of the tabs when a project card is tapped.

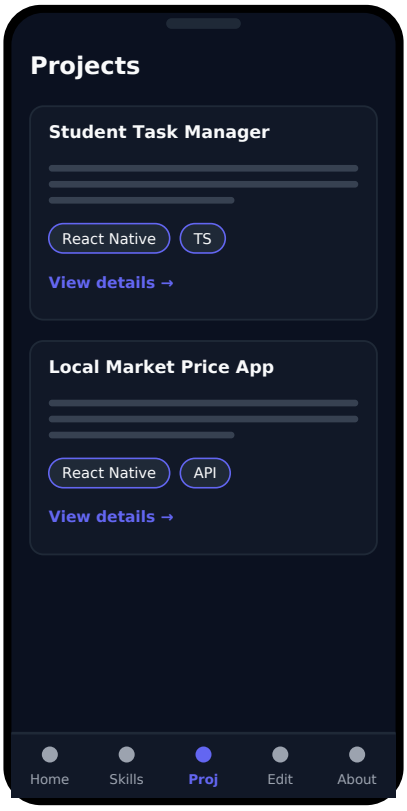

5. Wireframes

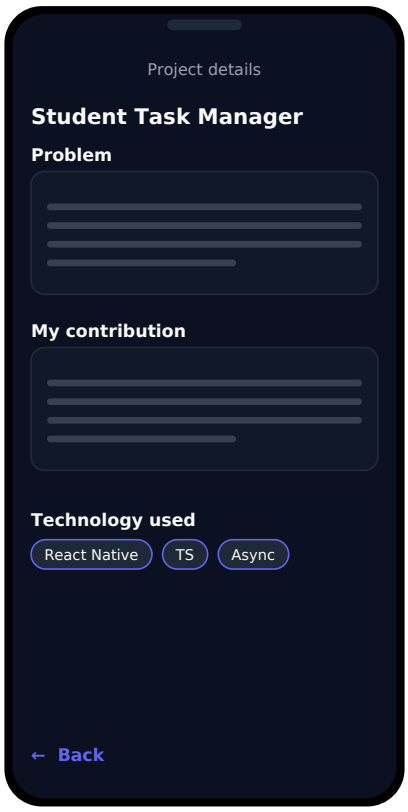

Home

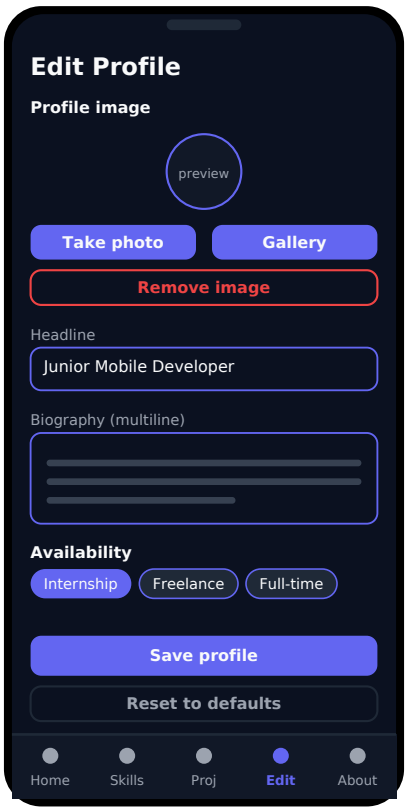

Skills

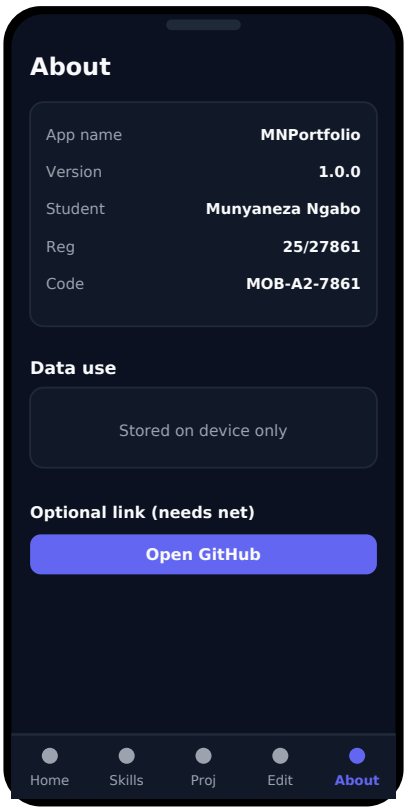

Projects

Project Details

Editor

About

6. Interaction states

State	Appearance	Preview
Default button	Solid indigo (#6366F1), 48 pt tall	Save profile
Pressed button	85 % opacity	Save profile
Disabled button	50 % opacity, no response to tap	Save profile
Loading button	Centered spinner, taps ignored	
Field error	Red 1 pt border + red helper text below the input	Headline Headline is required.
Empty list	Centered message: title + explanatory text	**Nothing here yet** Add items to see them listed.
Permission denied	Native alert with clear explanation and no crash	**Camera permission needed** Enable it in Settings to take a photo. OK

7. Accessibility decisions

- All text ≥ 14 pt; primary content ≥ 15 pt.
- Tappable targets ≥ 48 × 48 pt (buttons, chips, rows).
- Colour is never the only cue: availability uses a filled dot **and** a label; errors use colour **and** text.
- Contrast of body text on background is ≥ 7:1; muted text ≥ 4.5:1.
- Screen reader labels provided by default on `Text`, `Pressable`, `TextInput`.
- Layout uses `SafeAreaView` so content is never hidden under notches.
- Layout uses Flexbox only, so it reflows for large system fonts without clipping.

8. Agreement with final application

The wireframes above match the shipped APK screen-for-screen. Screen titles, tab names, button labels and error messages in this document are the exact strings used in the released app.
